

# MARINE RENEWABLES CANADA

marine  
renewables  
canada

Marine Renewables Canada is a national association for tidal, offshore wind, wave, and river current energy development. We represent technology and project developers, utilities, suppliers, government, and researchers. Since 2004, the organization has worked to advance the development of a marine renewable energy industry in Canada that can be globally competitive.

## What we do

- Advocate for supportive policies, programs, and investments to advance the sector.
- Foster communication and collaboration between members, industry, academia, government, and the public.
- Develop competitive intelligence and strategic relationships.
- Lead outreach and engagement activities to increase knowledge of marine renewable energy activities and the economic, environmental, and social benefits they present.
- Support members and industry by increasing exposure of Canadian companies in the world market and identifying business development opportunities.

## Our membership

Members of association have a broad range of strengths and expertise that can service both domestic and global project needs as the marine renewable energy industry grows. Our membership includes:

- Over 80 members from across Canada and internationally working in marine renewable energy and other marine, offshore, and energy sectors.
- Engagement of universities and research organizations across, as well as local authorities and government.
